Immediate Joiner • Open to Relocation • Remote / Hybrid / On-site

PROFESSIONAL SUMMARY

Frontend Engineer with 2.5+ years delivering production-grade React and React Native applications for enterprise and healthcare clients. Architected 2 full products from scratch, led a 3-person frontend team, and improved Lighthouse performance from 60 to 90+. Strong in TypeScript, Redux (Toolkit/Thunk/Saga), and real-time systems.

KEY ACHIEVEMENTS

- Architected **2 production applications from scratch** (enterprise task management + hospital food ordering platform) — both live in production and serving real users
- Boosted Lighthouse performance score **from ~60 to 90+** via lazy loading, code splitting, Suspense, image optimization, and render-blocking elimination
- **Led a 3-person frontend team:** conducted code reviews, drove architecture decisions, and mentored junior engineers across 4 production applications
- Built a **drag-and-drop visual workflow builder** (React Flow) with conditional branching, validations, and task dependencies — rare capability at any experience level
- Delivered **cross-platform coverage** across React web + React Native mobile (transport management system), and a **4-module platform** with shared design system (food ordering)

PROFESSIONAL EXPERIENCE

Frontend Engineer | IIOTX Technologies Pvt Ltd — Trivandrum, Kerala

Nov 2023 – Mar 2026

- Spearheaded frontend across 4 production apps (2 built from scratch, 2 redesigned), shipping features for enterprise and healthcare clients across India.
- Directed a 3-developer frontend team — owning sprint planning, code reviews, and architecture decisions; reduced onboarding time by establishing documented conventions.
- Engineered a React Flow-based visual workflow builder with conditional branching, SLA tracking, and RBAC-controlled task routing.
- Drove Lighthouse performance from ~60 to 90+ via code splitting, React lazy/Suspense, image optimization, and tree-shaking; cut initial load time by ~40%.
- Architected schema-driven dynamic forms (SurveyJS) eliminating hardcoded logic across 10+ approval workflows.
- Integrated Firebase Realtime Database, push notifications, and offline PWA support; implemented i18next with full RTL/LTR switching for Arabic/English deployments.

PROJECTS

Personal — Full-Stack

Rentic — Car Rental Management Platform | *React (TypeScript), Redux Toolkit, TanStack Query, Java Spring Boot, MongoDB, Redis, Docker, Firebase*

- Architected a multi-tenant marketplace (Customer PWA, Vendor Portal, Admin Dashboard) on a microservice-ready Spring Boot monolith; containerized the full stack (API, MongoDB, Redis) via Docker Compose for single-command environment spin-up.
- Implemented Redis caching on high-traffic endpoints, reducing DB read latency by ~40%; engineered zero-exposure auth using JWT in HttpOnly Cookies with Email OTP and Firebase multi-factor verification.

Professional — Built from Scratch

Tasks Management System (Enterprise) | *React, TypeScript, Redux Toolkit, React Flow, SurveyJS, Material-UI, Firebase*

- Architected full frontend from ground up: RBAC routing, dynamic module loading, and feature-based folder structure supporting 15+ user roles.
- Built drag-and-drop workflow builder (React Flow) with conditional logic and SLA enforcement; integrated SurveyJS schema-driven forms, cutting form dev effort by 60%.

Hospital Food Ordering Platform | *React, TypeScript, Redux Thunk, Tailwind CSS, i18next, Razorpay*

- Designed a 4-module platform (patient ordering, OMS, KDS, delivery) with a shared component library and unified Redux state; integrated Razorpay payment gateway.
- Established a reusable component system across all 4 modules, cutting duplicate code by ~35% and accelerating feature delivery.

Professional — UI Redesign & New Features

Intra-Hospital Transport Management System | *React, React Native, TypeScript, Redux Saga, SCSS*

- Led end-to-end UI redesign across web and React Native mobile; rebuilt component library and added real-time transport tracking and staff utilization dashboard.

Operation Theatre (OT) Booking System | *React, TypeScript, Redux Thunk, Firebase Messaging, SCSS*

- Redesigned scheduling UI; added Firebase push notifications, surgeon allocation workflows, and fixed legacy conflict detection bugs — significantly reducing double-bookings.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Python

Frontend: React.js, React Native, Next.js, Redux (Toolkit / Thunk / Saga), Context API

Styling: Tailwind CSS, SCSS Modules, Material-UI (MUI), Styled Components, Shadcn/UI

Libraries & Tools: React Flow, SurveyJS, RRule.js, i18next, Vitest, Jest, React Testing Library

Build & Infra: Vite, Webpack, Git, Firebase, PWA, Micro Frontend / Module Federation, Figma

Backend & DevOps: Java, Spring Boot, MongoDB, Redis, Docker, Docker Compose

Learning: AWS, CI/CD Pipelines, Kubernetes, Microservices Architecture

EDUCATION

B.Tech in Information Technology

2020 – 2023

Government Engineering College Bartonhill, Trivandrum

Diploma in Computer Engineering

2017 – 2020

Government Polytechnic College Neyyattinkara
